78. * -----
79. * DEFAULT CONTROLLER
80. * -----
81. *
82. * Normally you will set your default controller in the routes.php file.
83. * You can, however, force a custom routing by hard-coding a
84. * specific controller class/function here. For most applications, you
85. * WILL NOT set your routing here, but it's an option for those
86. * special instances where you might want to override the standard
87. * routing in a specific front controller that shares a common CI installation.
88. *
89. * IMPORTANT: If you set the routing here, NO OTHER controller will be
90. * callable. In essence, this preference limits your application to ONE
91. * specific controller. Leave the function name blank if you need
92. * to call functions dynamically via the URI.
93. *
94. * Un-comment the $routing array below to use this feature
95. *
96. */
