Activity Results

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `startActivityForResult(i)` allows us to “return” data to the calling Activity
- ▶ `onActivityResult(int requestCode, int resultCode, Intent data);`
 - ▶ `requestCode`: unique integer to determine what Activity returned
 - ▶ `resultCode`: `RESULT_OK`, `RESULT_CANCELED`
 - ▶ `data`: `Intent` to receive additional data

Activity Results

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `setResult(int resultCode, Intent data);`
 - ▶ `resultCode: RESULT_OK, RESULT_CANCELED`
 - ▶ `data: Intent to pass additional data`
- ▶ `finish()` pops from stack and sends control back to previous Activity

Bundles

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ Bundle objects store key/value pairs via `put<type>` and `get<type>` methods
 - ▶ Boolean, Byte, Char, Double, Float, Int, Long, String, etc.
 - ▶ BooleanArray, ByteArray, CharArray, etc.
- ▶ can get `size()` and `keySet()`

Bundles

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `intent.putExtras(Bundle bundle);`
 - ▶ associate a bundle with an intent
- ▶ `getIntent().getExtras();`
 - ▶ get the bundle associated with an intent
- ▶ **can also simply** `intent.putExtra(String key, value);`
 - ▶ `intent.get<type>Extra(String key);`

Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ described as XML, stored in `res/menu`
- ▶ `<menu>` has multiple `<item>` children
- ▶ accessed just like other resources, via `R.menu.<filename>`

Menus

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `onCreateOptionsMenu(Menu menu)`
 - ▶ user presses menu button on device
- ▶ `onCreateContextMenu(ContextMenu menu, View v, ContextMenuInfo menuInfo)`
 - ▶ user holds down a `View` (like right-clicking)
 - ▶ need to `registerForContextMenu(View v)`

Menus

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `onOptionsItemSelected()` (MenuItem item)
 - ▶ user selects an option from menu button menu
- ▶ `onContextItemSelected()` (MenuItem item)
 - ▶ user selects an option from a context menu
- ▶ `item.getItemId()` gets ID of selected item

Submenus

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `<item>` elements can also contain other `<menu>` items
- ▶ when `<item>` is selected, a submenu will open as a context menu

Reflection

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ general term that refers to an application working with its own data structure at runtime
 - ▶ invoke methods specified by strings
 - ▶ iterate through class properties
- ▶ `java.lang.reflect.*;`

Reflection

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ **get class from instance:** `int x = 5; Class c = x.getClass();`
- ▶ **get class from type:** `Class c = boolean.class;`
 - ▶ we've been using this for Intents all along
- ▶ **get class from String:** `Class c = Class.forName("net.cs76.Hello");`
- ▶ **get superclass from class:** `Class c = MyActivity.class.getSuperClass();`

Reflection

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ once we have a class, we can see what it looks like
- ▶ get all fields: `c.getFields()`;
 - ▶ get single field: `f = c.getField(String name);`
 - ▶ get value of an instance: `f.get(Object instance);`
 - ▶ also `getInt`, `getBoolean`, etc.
 - ▶ set value of an instance: `f.set(Object instance, value);`
- ▶ get all methods: `c.getMethods()`;

Reflection

Android:
Intents,
Menus,
Reflection,

ListViews

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ display a vertically scrollable list items
- ▶ special type of Activity: extends `ListActivity`
- ▶ each item defined by a layout (containing a `TextView`) in `res/layouts/<layout>.xml`
 - ▶ as usual, accessible via `R.layout.<filename>`

ArrayAdapter

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ adapters bridge the model and view
- ▶ `ArrayAdapter<String> a = new ArrayAdapter<String>(Context c, int resource, List objects);`
 - ▶ creates an adapter to display a list of objects
- ▶ `ListView` uses an `ListAdapter` to get data to be displayed in the `View`
- ▶ `setListAdapter(listAdapter)` sets the `ListAdapter` for a `View`

ListViews

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ **every `ListActivity` has an associated `ListView`**
 - ▶ `getListView()`;
- ▶ **event handlers attached to `ListView`, NOT individual elements**
 - ▶ `getListView().setOnClickListener()`;

StringArray

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ `res/values/strings.xml` can also contain arrays of strings
- ▶ `<string-array>` has `<item>` children
 - ▶

```
String[] a = getResources().  
getStringArray(R.array.<array name>);
```

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ what if we want more than just a `TextView`?
- ▶ we can also create our own adapters by extending `BaseAdapter`, `CursorAdapter`, **etc.**
 - ▶ need to define:
 - ▶ `getCount()`, `getItem()`, `getItemId()`, `getView()`

ArrayAdapter

Android:
Intents,
Menus,
Reflection,
and ListViews

Tommy
MacWilliam

Intents
Review

Menus

Reflection

ListViews

Tags

- ▶ what if we don't want to write all those methods?
- ▶ `extends ArrayAdapter` means we already have those methods written for a simple `List` of items
- ▶ `@Override` to redefine those methods to add more functionality than the default

ArrayAdapter

Android:
